# PEST OPTIX®
HUB

GET THE BIG PICTURE OF RODENT AND INSECT ACTIVITY

PestOptix Hub is a flexible, easy-to-install monitoring device for all species of rodents and many insects. When the camera is triggered, advanced, AI-powered software determines if there is a rodent or insect present. If there is, an alert is sent so that you are always up to date on activity at your sites. The solution can be used with either glue boards or snap traps (one rat snap or two mouse snap with retainer plug).
DIMENSIONS:

Station: 11.45 in L x 6.65 in W x 6.29 in H
PestOptix Camera: 6.06 in L x 3.54 in W x 1.02 in H

AI-ENABLED

At the core of PestOptix is an artificial intelligence (AI) enabled cloud-based software. Similar to popular AI systems like Apple Siri® or Amazon Alexa®, PestOptix AI is comprised of sophisticated algorithms that have been trained to react to inputs. The AI software monitors the image inputs taken from camera sensors in traps in real time. When a pest enters a trap, PestOptix AI uses facial recognition algorithms to identify the pest type and alerts pest management professionals.

— HUB —

Locking lid opens from right to left for easy opening and servicing, even when installed close to walls.

The camera is securely mounted to the lid of the station with an optional cover to keep the camera protected.

Inside the lid is a mounted PIR and two springs wired to the camera's sensors (PIR and touch). At the entry point of either side, a touch bar engages with the springs when the lid is closed.

If allowed, rodenticides can be used on two vertical bait rods. The internal guide walls are installed to guide rodents to bait area, where the PestOptix can view rodent behavior and bait consumption real-time.

Optional wall mount bracket on the back of the PestOptix hub makes it easy to keep the station in place.
